QUIZ 4 SET B **WINTER SEMESTER, 2024–2025**

DURATION: 30 MINUTES **FULL MARKS: 20**

Math 4341: Linear Algebra

Programmable calculators are not allowed. Do not write anything on the question paper.
Answer **all 2 (two)** questions. Figures in the right margin indicate full marks of questions with corresponding COs and POs in parentheses.

---

1. Find the Singular Value Decomposition (SVD) ($A = U\Sigma V^T$) for $A = \begin{bmatrix} 1 & 0 & 1 \\ -1 & 1 & 0 \end{bmatrix}$ 10 (CO3) (PO1)

2. A sequence is given by 10 (CO3) (PO1)

$$1,\ 4,\ 5,\ -2,\ -19, \cdots$$

where each term is obtained as a linear combination of the two preceding terms. The first two terms of the sequence are $a_0 = 1$ and $a_1 = 4$.

   a) Determine the recurrence relation for the sequence. In other words, express a_n in terms of a_{n-1} and a_{n-2}.

   b) Express the recurrence relation obtained in Question 2.a in matrix form and use diagonalization to derive a formula for the k-th term of the sequence.

   c) Using the result obtained in Question 2.b, compute the 10th term of the sequence and verify that $a_{10} = -307$.
